**Question of the Day: I was around someone who has COVID-19, and my COVID-19 test came back negative. Do I still need to quarantine for 14 days after I was last exposed? (Source: Centers for Disease Control and Prevention)**

- Yes. You should still self-quarantine for 14 days since your last exposure.
- It can take up to 14 days after exposure to the virus for a person to develop COVID-19 symptoms. A negative result before end of the 14-day quarantine period does not rule out possible infection.
- By self-quarantining for 14 days, you lower the chance of possibly exposing others to COVID-19. The best way to protect yourself and others is to [stay home for 14 days if you think you've been exposed to someone who has COVID-19.](#)
